

1 ABSTRACT

2 The invention provides a caulking tube sealing cap which  
3 may be threaded onto a standard caulking tube nozzle after the  
4 tube has been opened. The cap generally includes a frusto-  
5 conically shaped internal threaded cavity. The internal cavity  
6 also includes an integrally formed sealing ring that  
7 compressively cooperates with the caulking tube tip to prevent  
8 air from entering the tube, thus extending the shelf-life of  
9 the unused caulk or other viscous material remaining in the  
10 tube.
